Please replace paragraph [0019] with the following amended paragraph:

[0019] One rotary rehabilitation apparatus 10 providing for the selection of a range of motion for one or both legs 200 of a person is shown in Figs. 1A-1D. An embodiment of the rotary rehabilitation apparatus for rehabilitating a person's upper extremities will be discussed in detail below. The rotary rehabilitation apparatus 10 is shown incorporated in a cycle-type exercise machine 100 having a support 102 with an arm 102a upon which the apparatus 10 is rotatably mounted, and a seat 104, positioned at a distance from the support 102. In this arrangement, the person can sit in the seat 104, place their feet 204 on the levers 12a and 12b and impart a pushing force thereto with their legs 200 to rotate a flywheel 14 at a center point 15 thereof around an axis extending in the horizontal plane.
